Title: Standard Form of Construction Contract: A Study of the Application of Fédération Internationale des Ingénieurs- Conseils (FIDIC) IN MALAYSIA

In line with this development in Standard Form of Contract in Malaysia, this research attempts to examine the application of Federation Internationale des Ingenieurs- Conseils (FIDIC) in the Malaysian construction's industry since its publication in 1987. Due to the lack of experience and knowledge for local contract users when using FIDIC, semi-structured interviews were used on eight professional respondents from west and east Malaysia who had used FIDIC to collect data on the application of this standard form. It concludes that FIDIC was not widely used but it is still applicable when it comes to international projects funded by the World Bank. The comments on the advantages and disadvantages by respondents were shown in the paper and the overall performance of FIDIC in Malaysia is gauged in this research.
